

Water level in Lake Skorradalsvatn 2020

The water level of Lake Skorradalsvatn exceeded ON Power's limit in the beginning of February 2020 due to heavy rainfalls, however the water level never exceeded the permitted limits which are 63.20 m.a.s.l. The Icelandic Meteorological Office has prepared an inflow model for Lake Skorradalsvatn, which shows the inflow into the lake three days in advance.
